## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 6, and 7 of copending Application No. 10/760180 (PGPub #: US20050156968). Although the conflicting claims are not identical, they are not patentably distinct from each other because the listed claims (1, 6, and 7) together include all the structure found in claim 1 of the present invention.

- ☐ Application No. 10/760180 discloses in claims 7/6/1 a cartridge for a digital photofinishing system, the digital photofinishing system having a digital processor and a printer arranged to receive drive signals from the digital processor; the cartridge comprising a roll of print media removably mounted to a tubular core and a

source of printing fluid to be delivered on demand to the printer, the source of printing fluid comprising at least one refillable container that is removably located within the tubular core and the cartridge incorporating means for coupling with a print media feed drive mechanism.

This is a provisional obviousness-type double patenting rejection.

#### ***Response to Arguments***

3. Applicant's arguments with respect to claim 1 has been considered but are moot in view of the new ground(s) of rejection.
